

*One part of each shape is shaded.*

*Two balls are circled.*

*Five apples are circled.*

*Two birds are circled.*

*Left to right:  $\frac{1}{2}$ ,  $\frac{1}{3}$ ,  $\frac{1}{4}$*

*James is correct. As the denominator gets bigger, the shape is split into more equal parts and therefore the parts become smaller.*

*If half of the number of counters is 12, this means that there are 24 counters in total, because 2 lots of 12 make 24.*

$$\frac{1}{3} \text{ of } 24 = 8$$

$$\frac{1}{4} \text{ of } 24 = 6$$
