

1.

These two shapes have the **same** perimeter.

regular hexagon

square

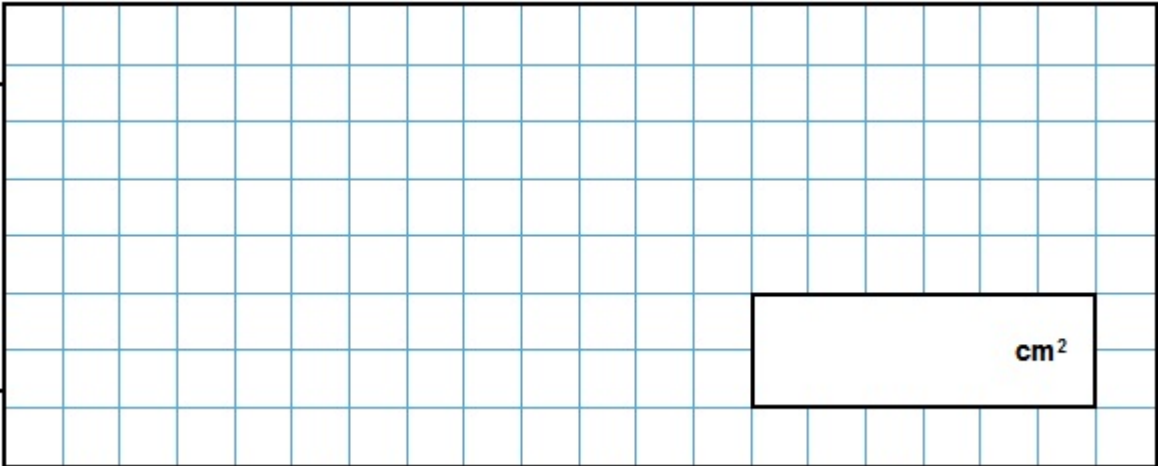

Not actual size

The length of each side of the **hexagon** is **8** centimetres.

Calculate the **area** of the **square**.

Show your method

2 marks

2.

A square tile measures 20 cm by 20 cm.

A rectangular tile is 3 cm **longer** and 2 cm **narrower** than the square tile.

What is the **difference in area** between the two tiles?

Show your method

cm²

A large grid for showing the method to find the difference in area between the two tiles. The grid is 20 units wide and 20 units high. A rounded rectangle on the left side contains the text "Show your method". A small rectangle in the bottom right corner of the grid contains the text "cm²".

3.

The area of a rugby pitch is 6,108 square metres.

A football pitch measures 112 metres long and 82 metres wide.

How much larger is the area of the football pitch than the area of the rugby pitch?

Show your method

square metres

3 marks

4.

The **area** of this square is 36 cm^2 .

Not actual size

The square is cut into quarters to create 4 identical rectangles.

What is the **perimeter** of **one** of the small rectangles?

2 marks

5.

A white square is painted in one corner of a grey square.

Each side of the white square is **half** the length of a side of the grey square.

What is the **area** of the grey section?

Show your method

cm²

6.

Rebecca has rectangular tiles like this.

Not to scale

She makes a larger rectangle using 4 of the tiles.

What is the **area** of the larger rectangle?

cm²

1 mark

7.

The area of a rectangle is 16 cm².

One of the sides is 2 cm long

What is the perimeter of the rectangle?

cm

1 mark

8.

Megan says,

***'If two rectangles have the same perimeter,
they must have the same area.'***

Is she correct?
Circle **Yes** or **No**.

Yes / No

Explain how you know.

1 mark

9.

Here is a T-shape made from 3 identical rectangles.

The area of the T-shape is **90 cm²**

Work out the value of x

2 marks

10.

Twelve rectangles, all the same size, are arranged to make a **square**, as shown in the diagram.

Calculate the **area** of **one** of the rectangles.

Show your method

cm^2

2 mark

Mark schemes

1.

Award **TWO** marks for the correct answer of 144

If the answer is incorrect, award **ONE** mark for evidence of an appropriate method, e.g.

- $8 \times 6 = 48$
 $48 \div 4 = 13$ (error)
 $13 \times 13 = 169$

OR

Award **ONE** mark for:

- evidence for the side length of the square calculated correctly, i.e. 12
*Answer need not be obtained for the award of **ONE** mark.*

Up to 2m

[2]

2.

Award **THREE** marks for the correct answer of 14

If the answer is incorrect, award **TWO** marks for:

- sight of 414 as evidence of 23×18 completed correctly

OR

- evidence of an appropriate method with no more than one arithmetic error, e.g.

$$20 \times 20 = 400$$

$$\begin{array}{r} 23 \\ \times 18 \\ \hline 230 \\ 184 \\ \hline 314 \text{ (error)} \end{array}$$

$$400 - 314 = 86$$

Award **ONE** mark for evidence of an appropriate method.

*Answer need not be obtained for the award of **ONE** mark.*

A misread of a number may affect the award of marks. No marks are awarded if there is more than one misread or if the mathematics is simplified.

***TWO** marks will be awarded for an appropriate method using the misread number followed through correctly to a final answer.*

***ONE** mark will be awarded for evidence of an appropriate method using the misread number followed through correctly with no more than one arithmetic error.*

Up to 3m

[3]

3.

Award **THREE** marks for the correct answer of 3076 square metres.

If the answer is incorrect, award **TWO** marks for:

- sight of 9184 as evidence of the multiplication for the first step completed correctly.

OR

- evidence of an appropriate method which contains no more than **ONE** arithmetical error, e.g:

$$\begin{array}{r} 112 \\ \times \underline{82} \\ 8960 \\ \underline{224} \\ 9187 \text{ (error)} \end{array}$$

$$\begin{array}{r} 9187 \\ - \underline{6108} \\ 3079 \end{array}$$

- Award **ONE** mark for evidence of an appropriate method which contains more than **ONE** arithmetical error.

Do not award any marks if the error is in the place value of the multiplication, e.g. the omission of the final zero when multiplying by tens, e.g.

$$\begin{array}{r} 112 \\ \times \underline{82} \\ 896 \\ \underline{224} \\ \text{wrong answer} \end{array}$$

Commentary: As well as a range of 1 mark and 2 mark questions, one of the questions in a suite of tests may now attract three marks. The solution to a 3 mark question may involve more steps or, as in this example, more complex calculations.

Up to 3m

[3]

4.

15

2

or

6(cm) and 1.5(cm) seen (*the dimensions of the rectangle*)

OR

Shows or implies a complete correct method, eg:

- $\sqrt{36} = 8$ (*error*)
 $8 \div 4 = 2$
 $2 \times (8 + 2)$
- $6 \times 6 = 36$
 $6 \div 4 = 1.2$ (*error*)
 $6 + 1.2 + 6 + 1.2$

Do not accept confusion between area and perimeter, ie:

- side of square is $36 \div 4 = 9$ (*error*)
 $2 \times (9 + 2.25)$

1

[2]

5.

Award **TWO** marks for the correct answer of 108

If the answer is incorrect, award **ONE** mark for evidence of appropriate method, eg

$$12 \times 12 = 144$$

$$\frac{3}{4} \text{ of } 144$$

OR

$$(12 \times 12) - (6 \times 6)$$

OR

$$(12 \times 12) + (6 \times 6)$$

OR

$$(6 \times 6) \times 3$$

*Answer need not be obtained for the award of **ONE** mark.*

Up to 2 (U1)

[2]

6.

800

[1]

7.

20 (cm)

[1]

8. Indicates No and gives a correct explanation that includes indicating two different areas, eg:

- A rectangle with sides 6 cm by 2 cm has a perimeter of 16 cm and an area of 12 cm² but a rectangle with sides 5 cm and 3 cm has the same perimeter of 16 cm but it has an area of 15 cm² which is different so she is not correct
- A square with sides 3 cm by 3 cm and a rectangle with sides 4 cm by 2 cm have the same perimeter of 12 cm but they have different areas of 9 cm² and 8 cm²

Accept minimally acceptable explanation, eg:

- $6 \times 2 = 12, 5 \times 3 = 15$

•

! Ignore any incorrect units given in an otherwise correct explanation, eg:

- 6^2 for 6 cm^2

! Indicates Yes, or no decision made, but explanation clearly correct

Condone, provided the explanation is more than minimal

Do not accept Incomplete or incorrect explanation, eg:

- $6 \times 2, 5 \times 3$
- *Two rectangles, one with sides 6 cm by 5 cm and one with sides 8 cm by 3 cm have the same perimeter of 22 cm but they don't have the same area*

•

[1]

9. 5 cm

2
U1

or

Answer of 2.5

OR

Shows understanding of a correct method even if there are computational errors, eg

- $90 \div 3 = 36$ (error)

$$12 \div 2 = 6$$

$$36 \div 6 = 6$$

1

[2]

10.

Award **TWO** marks for the correct answer of 75

If the answer is incorrect, award **ONE** mark for evidence of an appropriate method, eg

$$\text{width} = (50 - 40) \div 2$$

$$\text{length} = (50 - 5) \div 3$$

$$\text{area} = 5 \times 15$$

OR $(50^2 - 40^2) \div 12$

Calculation need not be completed for the award of the mark.
